

DIGITAL CAMERA AND MOBILE EQUIPMENT WITH
PHOTOGRAPHING AND DISPLAYING FUNCTION

ABSTRACT OF THE DISCLOSURE

5

Adigital camera has a display processor, a release button,
and a button operation detector. The display processor
displays an object image on a screen as a moving-image before
photographing a still-image. The release button is operated
10 for recording the still-image. The button operation detector
detects the contact of a finger with the release button. The
display processor superimposes photograph information on the
moving image when the button operation detector detects the
contact.
